Wolters Kluwer

What we're covering today

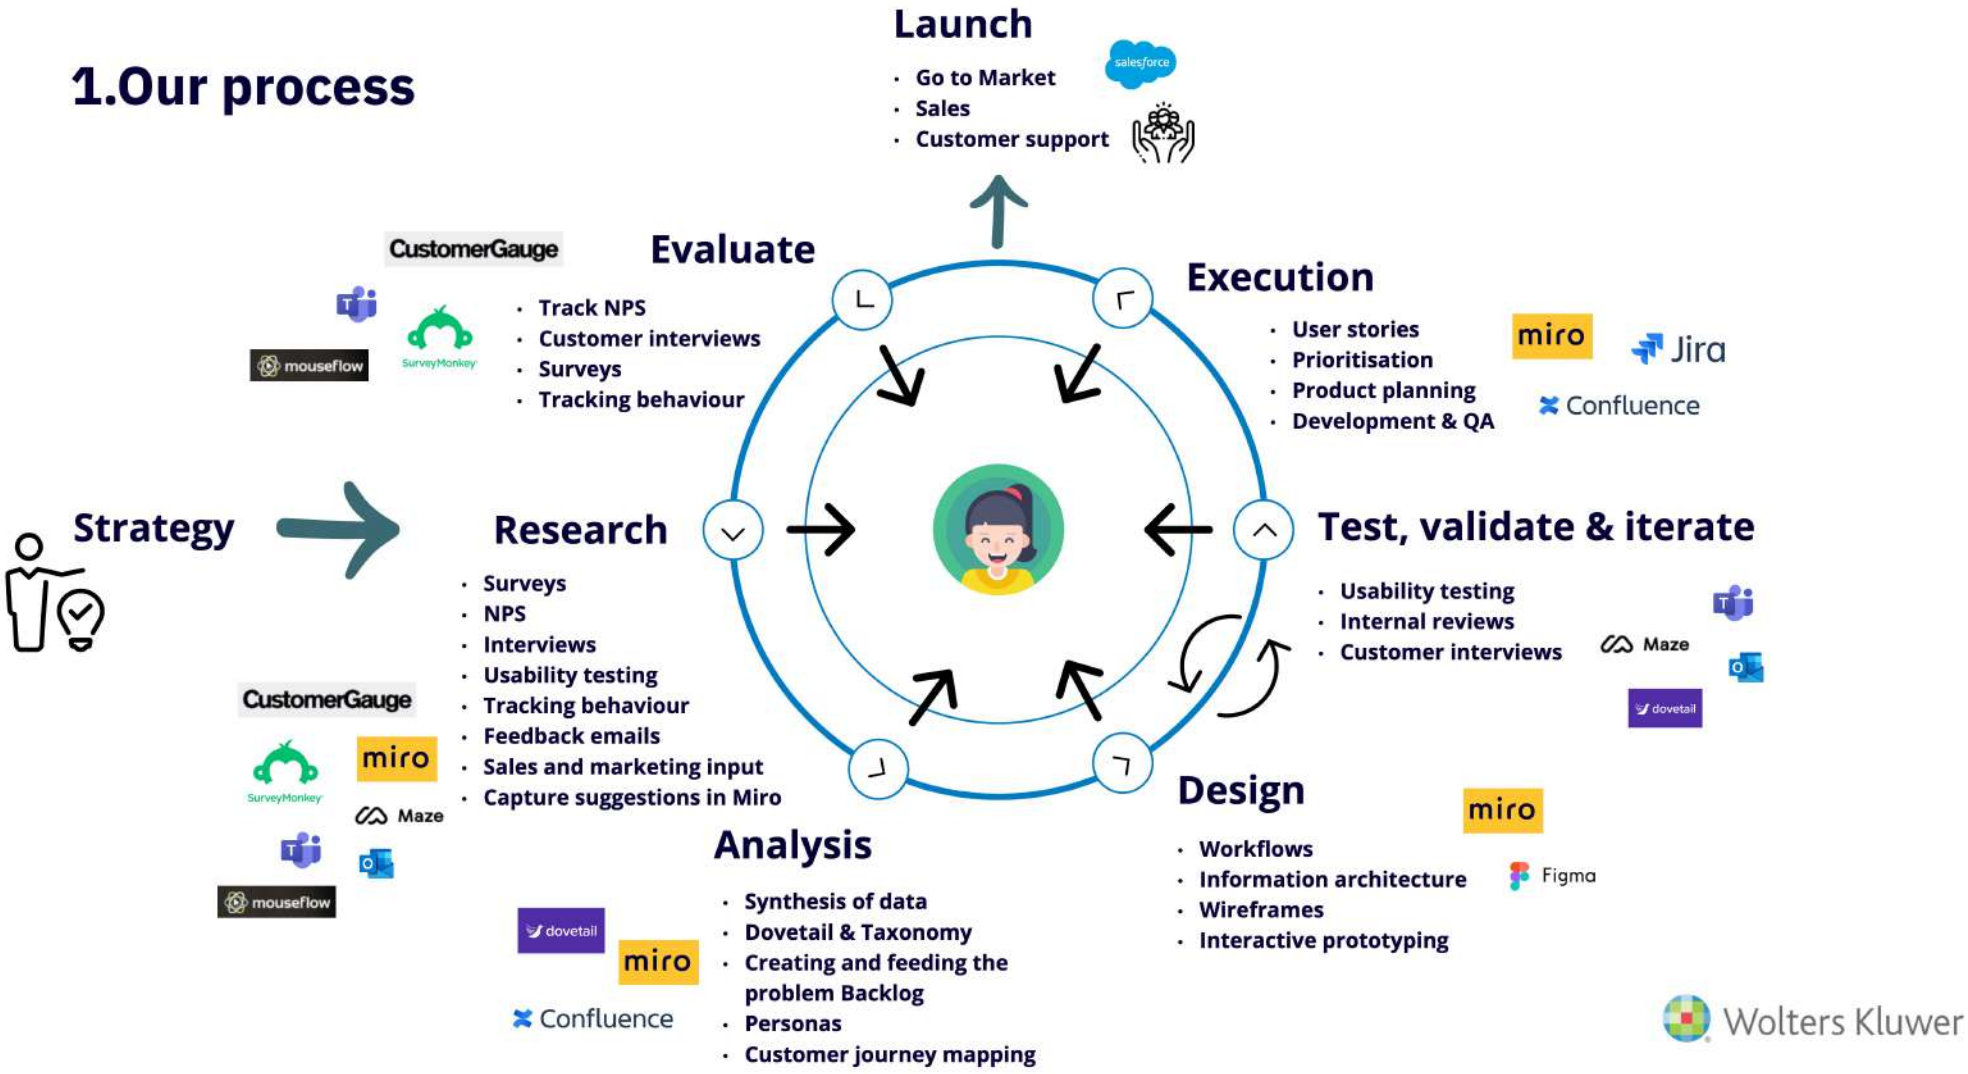
1. Introduction
2. Strategy
3. Research
4. Analysis
5. Design & production

1.Introduction

- Our process
- The benefits

Wolters Kluwer

1.Our process



Wolters Kluwer

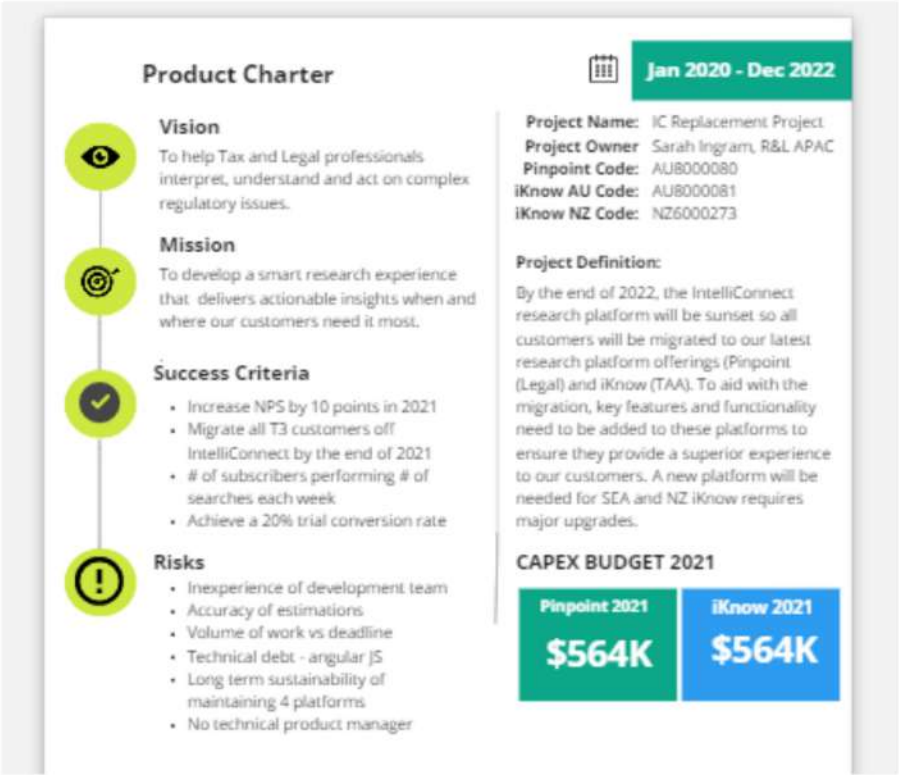
1.Why customer insights matter?

- Increases the effectiveness and relevance of our products and services
- Gain a deeper understanding of how our customers think
- Increases loyalty and trust in collaborating with our customers
- Decrease risks and saves money since we test before we execute
- Helps us solve our customer's problems and reveals new opportunities for growth

Wolters Kluwer

2.Strategy

- Product charter
  - Vision
  - Mission
  - Success Criteria
  - Project Definition
  - Risks
  - Roles and Responsibilities
- Roadmap
  - Business and customer driven



Product Charter

Jan 2020 - Dec 2022

Vision

To help Tax and Legal professionals interpret, understand and act on complex regulatory issues.

Mission

To develop a smart research experience that delivers actionable insights when and where our customers need it most.

Success Criteria

- Increase NPS by 10 points in 2021
- Migrate all T3 customers off IntelliConnect by the end of 2021
- # of subscribers performing # of searches each week
- Achieve a 20% trial conversion rate

Risks

- Inexperience of development team
- Accuracy of estimations
- Volume of work vs deadline
- Technical debt - angular JS
- Long term sustainability of maintaining 4 platforms
- No technical product manager

Project Name: IC Replacement Project
Project Owner Sarah Ingram, R&L APAC
Pinpoint Code: AU8000080
iKnow AU Code: AU8000081
iKnow NZ Code: NZ6000273

Project Definition:

By the end of 2022, the IntelliConnect research platform will be sunset so all customers will be migrated to our latest research platform offerings (Pinpoint (Legal) and iKnow (TAA). To aid with the migration, key features and functionality need to be added to these platforms to ensure they provide a superior experience to our customers. A new platform will be needed for SEA and NZ iKnow requires major upgrades.

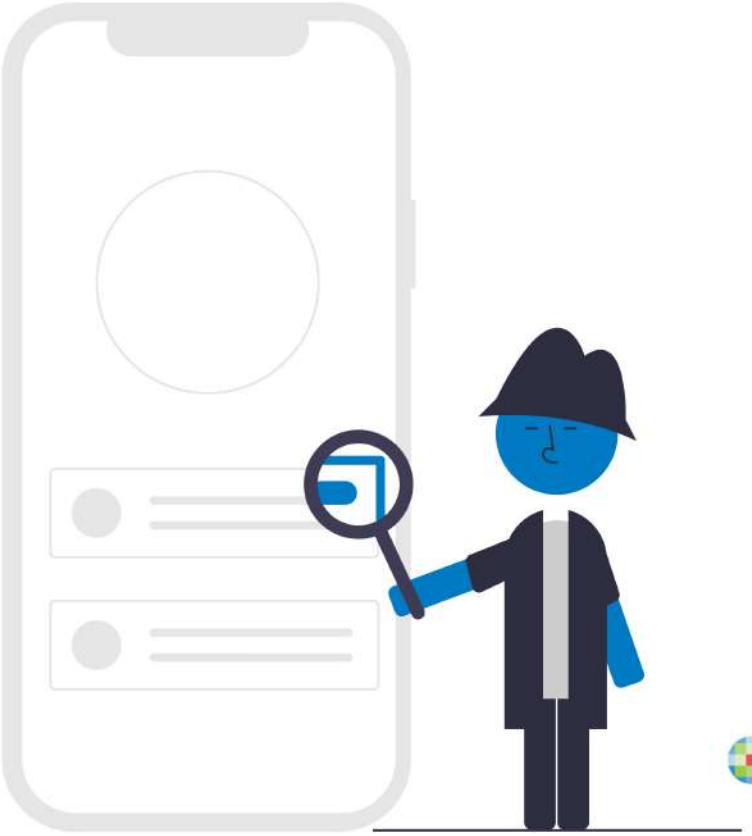
CAPEX BUDGET 2021

Pinpoint 2021	iKnow 2021
$564K	$564K

Wolters Kluwer

3.Gathering and collecting research

- NPS
- Mouseflow
- Customer interviews
- Surveys
- Usability testing
    - Wireframes (moderated)
    - Maze (unmoderated)
- Virtual Wall of Pain
- Feedback mails
- Capture using Miro

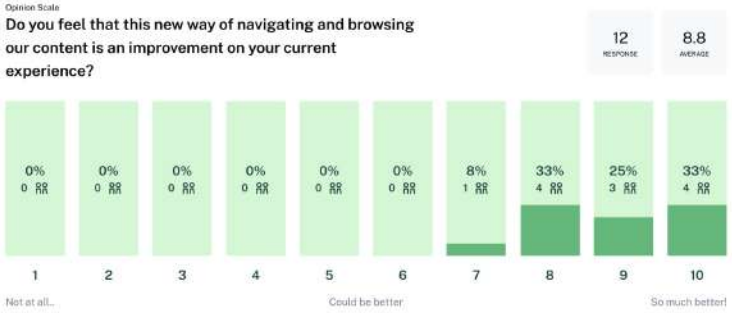


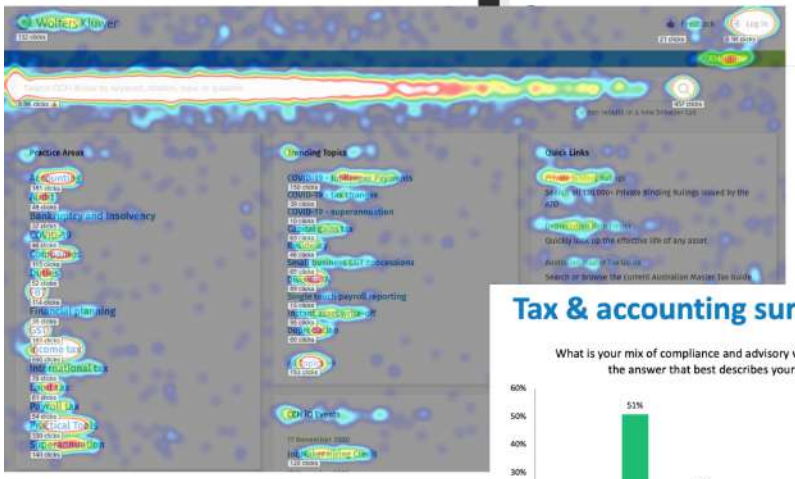
Wolters Kluwer

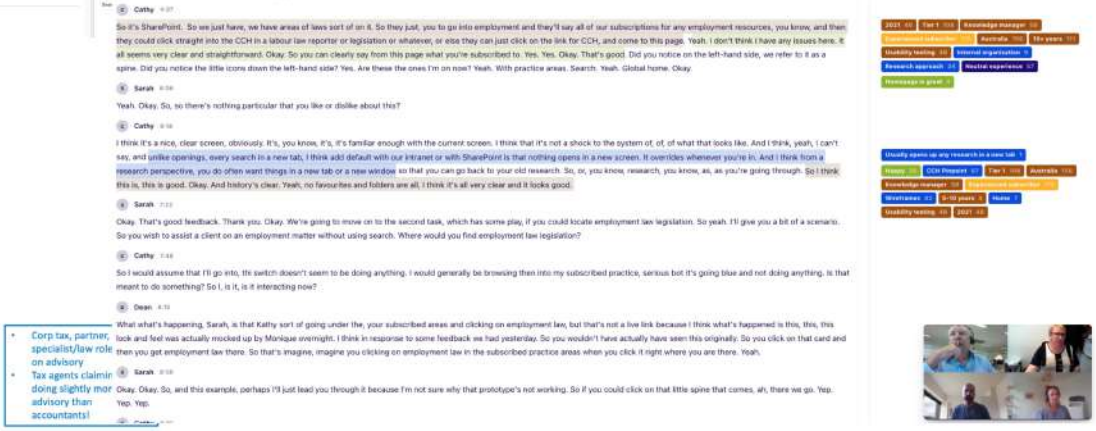
3.Channels and tools

- **NPS** to track overall product trends and sentiment
- **Mouseflow** to track behaviour and usage statistics, including time on site, how many pages visited, attention and focus on elements and much more. (On hold because of privacy concerns)
- **Customer interviews** to uncover problems in a qualitative setting. Create a deeper understanding of our customer needs. The "WHY"
- **Surveys** to uncover problems, sentiment, wants and needs in a quantitative setting. How "MANY" people experience this problem, face this issue, are doing or want [X]
- **Usability testing** to uncover product experience issues, testing the ease of use of new functionality, navigation changes, or other updates or current state of the experience, both in a qualitative and quantitative setting. Letting the user perform tasks with the new design
    - Interviews (moderated)
    - Maze (unmoderated)

3.Channels and tools





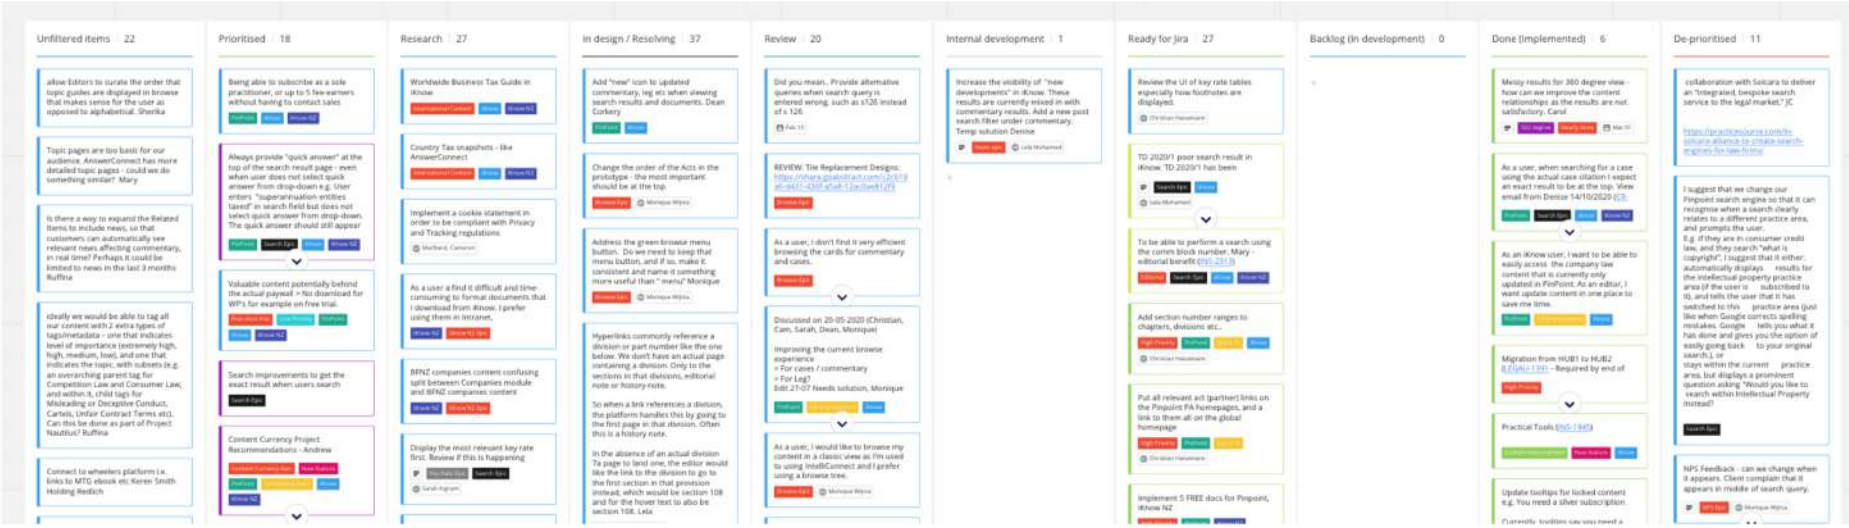


- Corp tax, partner, specialist/law role on advisory
- Tax agents claimin doing slightly mor advisory than accountants!

Wolters Kluwer

3.Feedback and painpoints

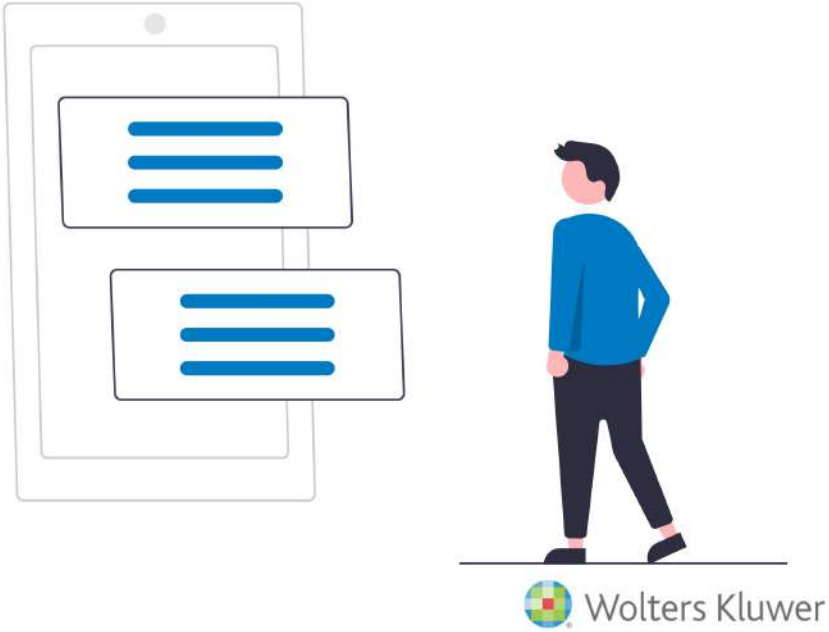
- Wall of Pain and Gain
- Feedback emails
- Capture using Miro



Wolters Kluwer

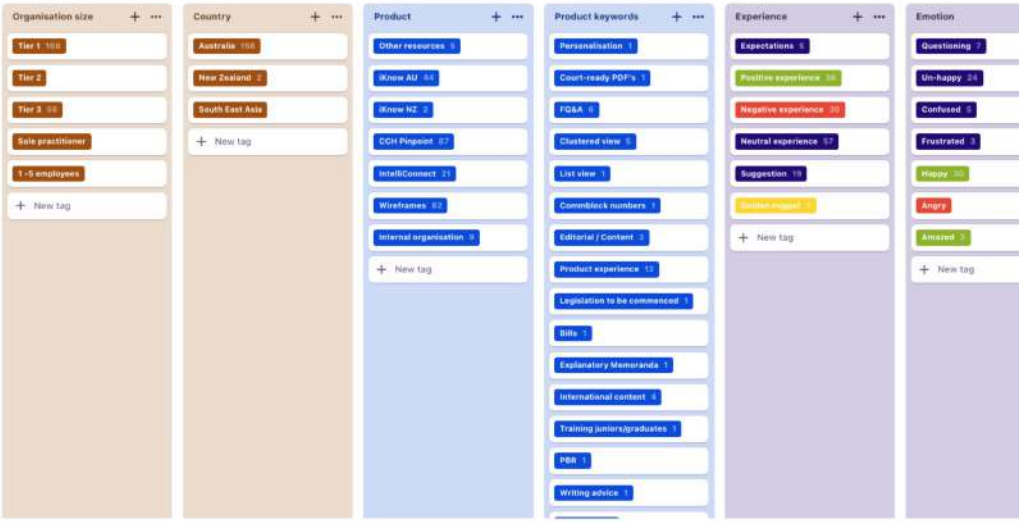
4. Analysis

- Dovetail
- Taxonomy and tagging
- Maze results
- Personas
- Customer Journey Maps



4.Dovetail, Taxonomy and tagging

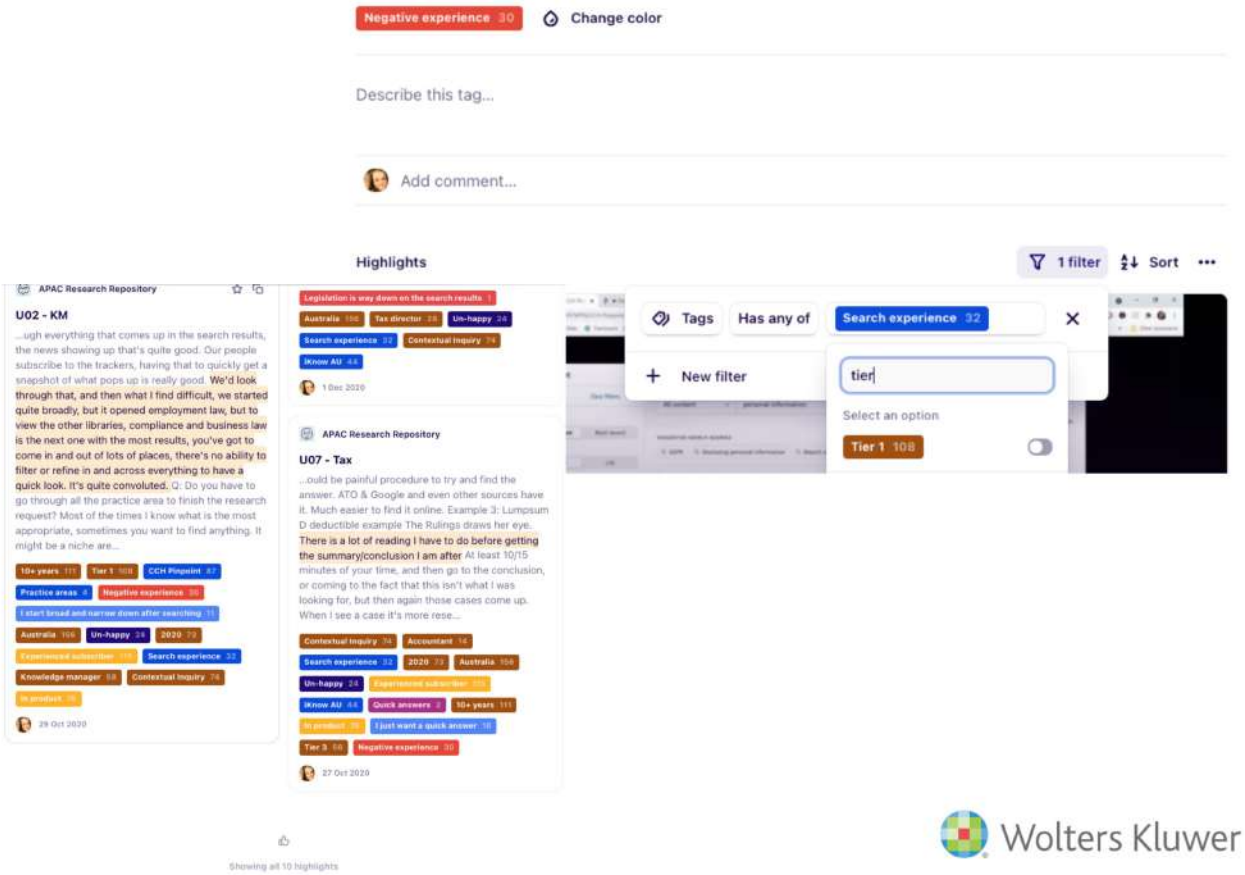
- Dovetail can be used as a repository of all user research data
- Advanced tagging and filtering to answer burning question
- A taxonomy on top of all our data



Wolters Kluwer

4.Dovetail, Taxonomy and tagging

All this data is qualitative, but by creating a taxonomy, you can quantify nuggets within the research.



Wolters Kluwer

4.Dovetail, taxonomy and tagging

Highlights and tags can be collected within "insights" These are basically one-pagers on which you can define the problem and support it with gathered user research.

Example

Summary

Currently the search experience is not optimal. Users can't seem to find the exact answer or documents they are looking for.

- For knowledge managers searching only one practice area is not useful, since they are working across practice areas
- Primary materials are the starting point, and when deeper research is needed, they move on to secondary sources
- There's no clear consensus on Cluster search results vs List search results, so we need to cater for both
- Advanced search as showed in the browse and search usability testing is liked by everyone
- Keyword searching needs to be more intuitive and give better results
- Search suggestions could help lead users to the right search query to find their answers. Either from a broad search to something more specific, or from a very specific search to something more broad, if no accurate results come up for something very specific.
- Boolean connectors as shown in the browse and search wireframes are liked
- Exact match when there is one, should be prominent at the top for easy access
- Experienced knowledge managers prefer to see the titles of the book where the result is coming from to determine relevancy
- The commblock numbers are mentioned as unique identifiers and could be helpful to search on to quickly get the result back. (This functionality is also requested by editorial)
- Based on roles different content types should be prominently featured. (e.g Commentary and practical content for accountants, legislation for lawyers, knowledge managers and tax advisers)

(More to be added)

APAC Research Repository

U01 - KM

Leona generally approaches research tasks from a lawyer perspective as that is her background i.e. start with the primary materials first, then move to secondary sources. She always searches first, over browsing i.e. would only

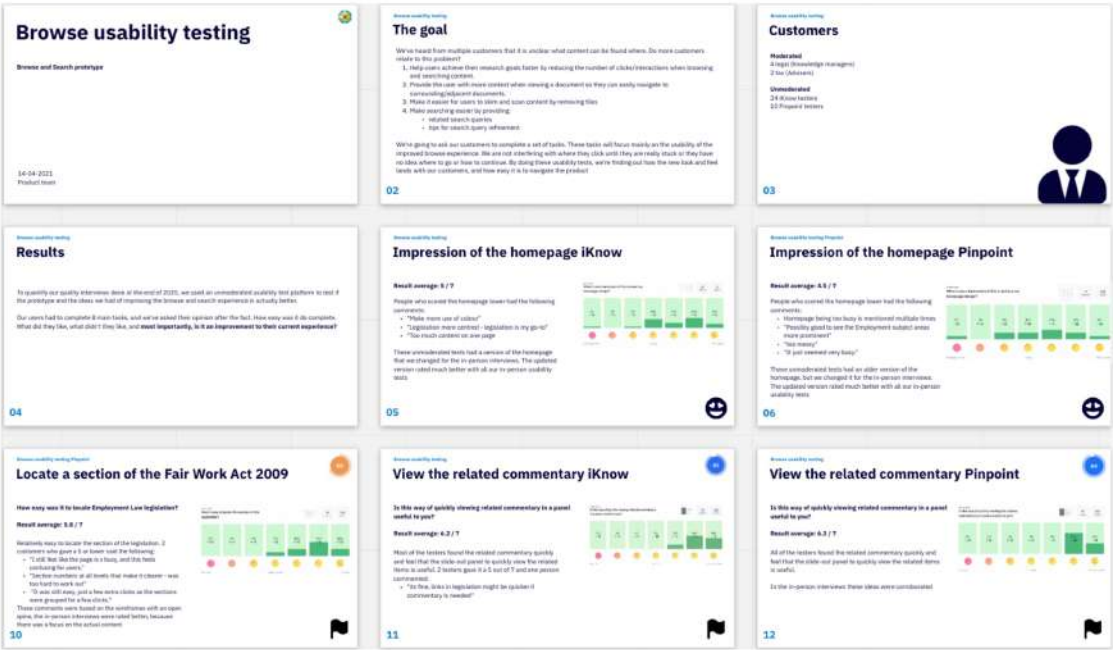
Wolters Kluwer

4.Maze results

The browse and search contextual inquiry really highlighted some of the biggest issues with Pinpoint and iKnow

We designed a completely new solution for the browse and search experience

This solution needed to be tested and validated



Wolters Kluwer

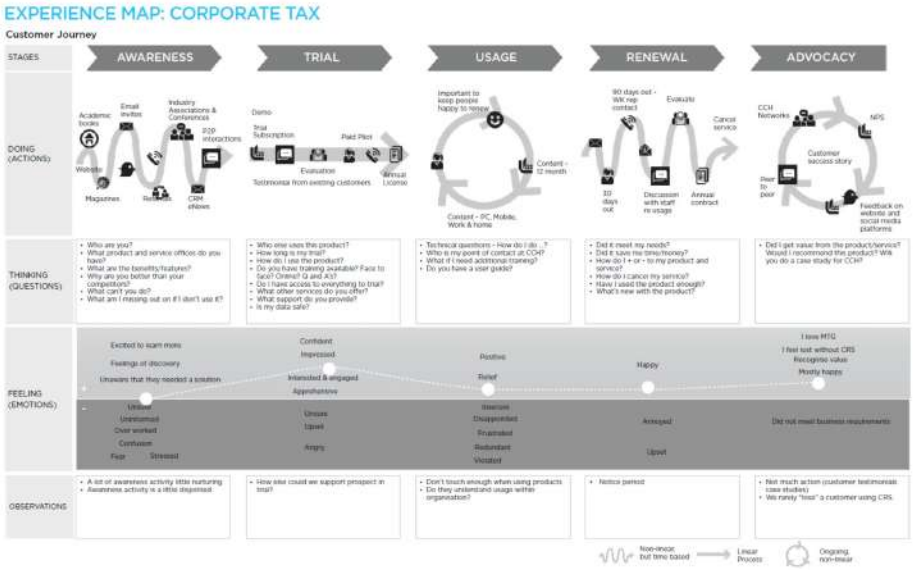
4.Personas & Customer Journey Maps

Development of a Universal APAC Persona Playbook based on real data

Wolters Kluwer

4.Personas & Customer Journey Maps

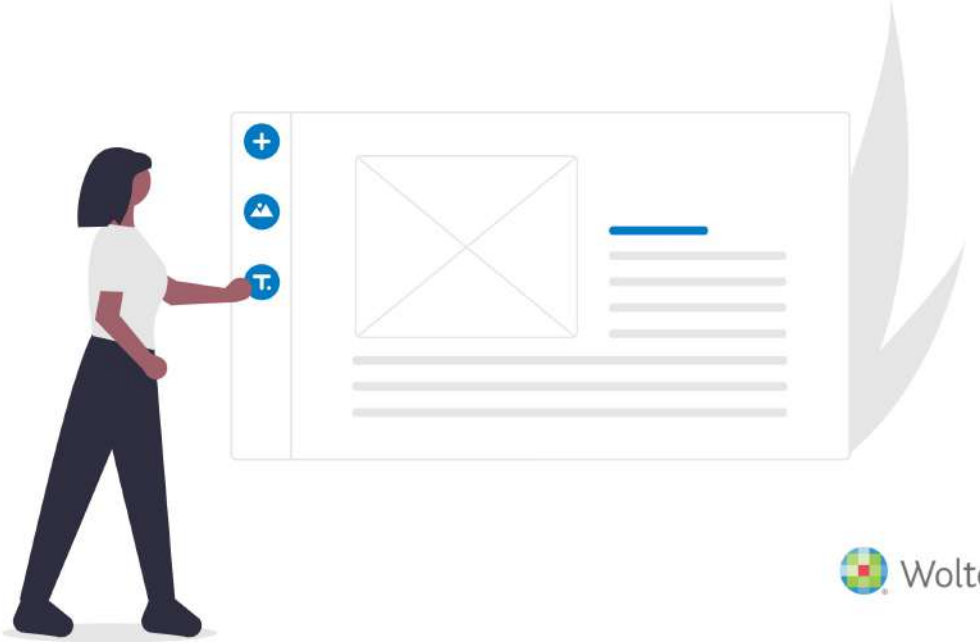
Development of customer journey maps based on each of these Personas



Wolters Kluwer

5.Design and production

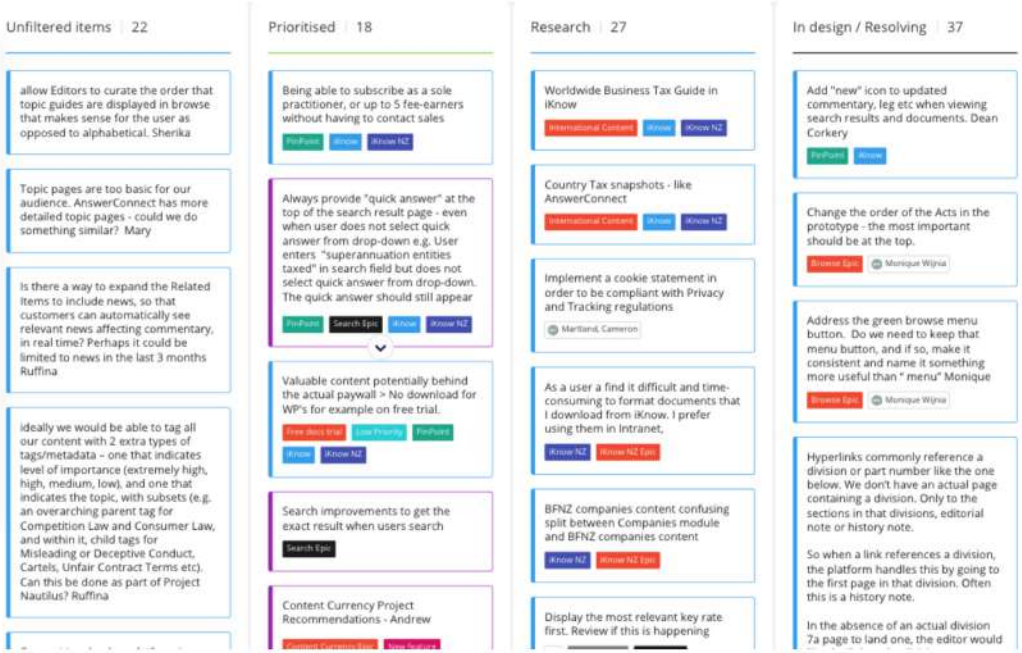
- Problem backlog / statements
- Solution, design
- Test designs
- Iterate
- Prioritising the problem
- Create the user story which feeds into product increments



Wolters Kluwer

5.Initial problem and priority

- Our strategy board takes the feedback from different teams and channels.
- We look at the prioritised lane, and when we decide to tackle the problem we shift the ticket into the research or design/resolving lane (if research is sufficient or not needed)
- Create initial problem statement

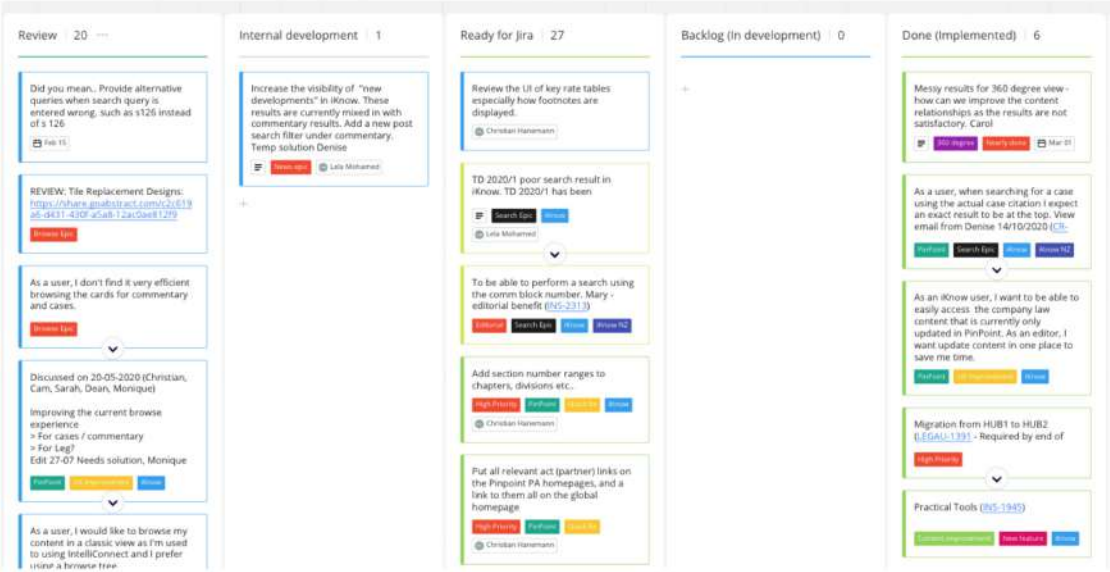


Wolters Kluwer

Design and/or resolving

- During the design phase we will continuously keep track of the user insights to make sure we are designing the right solution

- After the initial design we go and test if the design is actually working and if it's an improvement to the current state. (this is where usability testing (moderated and unmoderated come into play.



Wolters Kluwer

Testing and iterating

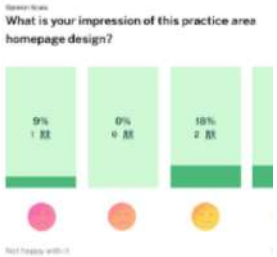
- If it doesn't test well with our users, or we hear the same feedback from multiple customers, or there's internal reviews that requires change to parts of the solution, we iterate (x2, 3, 4...).

- In this process we are also aware of any changes needed to the content structure, or underlying logic and collaborate with editorial and other team members accordingly

Browse usability testing Pinpoint

Impression of the homepage Pinpoint

Result average: 4.5 / 7



People who scored the homepage lower had the following comments:

- Homepage being too busy is mentioned multiple times
- "Possibly good to see the Employment subject areas more prominent"
- "too messy"
- "It just seemed very busy."

These unmoderated tests had an older version of the homepage, but we changed it for the in-person interviews. The updated version rated much better with all our in-person usability tests

Prioritise & writing the user story

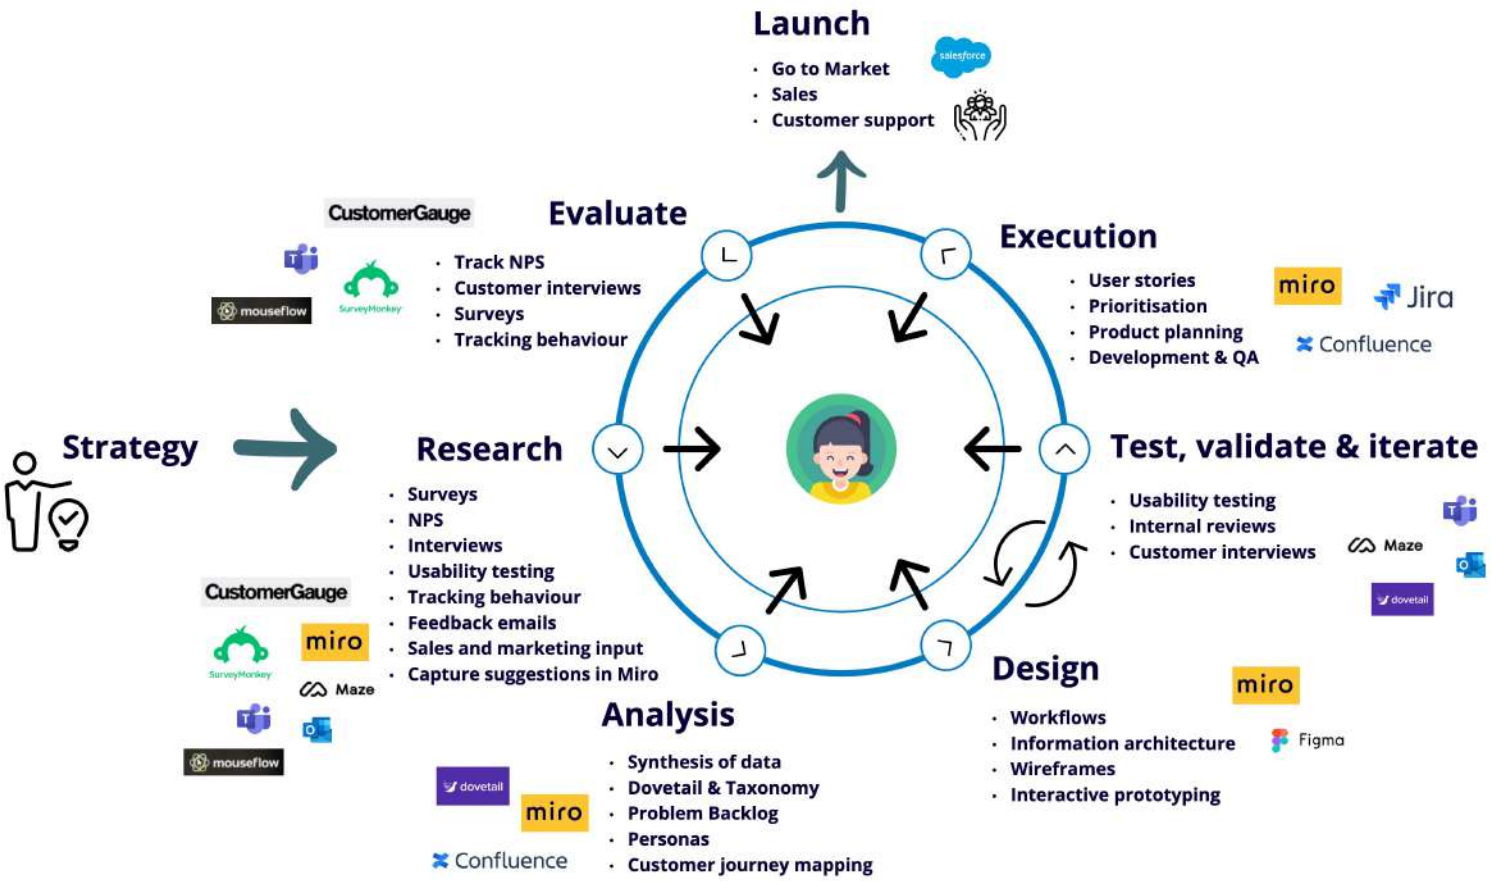
- We prioritise the problems that we want to solve first based on a impact, ease and effort calculation which sits in confluence on a Product Backlog page

- Then we write the user story that feeds into the product increments and add the ticket epics to this problem board so we can track which problems we have solved, are solving and are going to solve.

Title	Problem Description	Migration blocker?	Status	Jira (Epic) Ticket	PI planning	Priority (impact*ease*confidence)	Impact (1-10)	Ease (1-10)	Confidence (1-10)	Requested By	Reported
Unsatisfying search experience	Users find it hard to find what they're looking for	Yes	IN PROGRESS		Continuous	300	10	3	10	Everyone	01 Jan 2021
No access to international content	Currently all international content is still sitting on IntelliConnect and we need a way to take that to iKnow and Pinpoint	Yes	INITIAL		PI 9					Everyone	01 Jun 2020
Bad user experience for iKnow NZ	iKnow NZ hasn't been updates in a long time, users who are still on intelliconnect would need to migrate, but the user experience is not good enough as it currently is.	Yes	INITIAL		PI 8?					Everyone	01 Jun 2020
Non-existing platform for SEA customers	Users in south east asia who subscribe to IntelliConnect need a product to migrate to	Yes	INITIAL		PI 10					Everyone	01 Jun 2020
Frustrating browse experience	Users who browse are not happy with the current way they can browse.	Yes	INITIAL	LEGAU-1747 INS-2927	PI 7					Everyone	01 Nov 2020

Wolters Kluwer

Then we execute, launch, evaluate and continue the cycle...



Wolters Kluwer

"BTW – what I am happy about is that CCH is taking on the feedback. A lot of times I give feedback to other providers and it goes nowhere"
